# colorSENSOR OT Series

## colorSENSOR OT-3-LU-30

- Measuring range typ. 10 mm ... 40 mm
- Up to 31 colors can be stored
- RS232 interface (USB adapter is available)
- Up to 31 colors can be stored
- RS232 interface (USB adapter is available)
- 8x UV-LED, 382 nm, focused (AC-/DC-/PULSEoperation or OFF for luminous objects can be switched)
- Detection of different luminescent colors
- Insensitive to outside light in AC-operation and PULSE-operation
- Brightness correction can be activated
- Switching frequency up to 35 kHz
- Several TEACH functions (via PC, PLC, or push button)
- Various evaluation algorithms can be activated
- Switching state display by means of 5 yellow LEDs
- Temperature compensated in climatic cabinet
- "BEST HIT" mode ("human color assessment")
- Averaging' can be activated (from 1 up to over 32000 values)
- 3-color filter detector (true color detector: "human color perception")

## Design

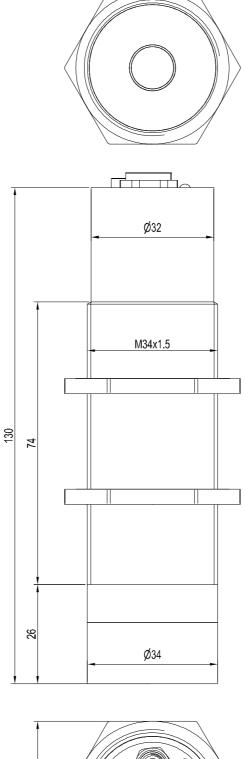

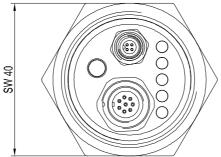

## **Technical Data**

Light source  8x UV-LED, 385 nm AC-, DC-operation (adjustable or OFF in case of luminous objects adjustable via software)  Illumination technique  Effect of illumination  Luminescent colors  Target distance  1yp. 10 mm - 40 mm ideal distance 30 mm  Light spot size  8 10 mm at 30 mm  Reproducibility  In the X, Y color range each 1 digit at 12-bit A/D conversion Color distance  8cociver  3-color filter detector (TRUE COLOR Detector, color filter bend according to CIE 1931)  Alternating light operation  AC typ. 10 kHz up to 40 kHz depends on the gain step (AMP1 up to AMP8) DC: adjustable via PC software  Ambient light  1P 67 (optics), IP 64 (controller)  Current consumption  1p 67 (optics), IP 64 (controller)  Current consumption  1p 72 (optics), IP 64 (controller)  Current consumption  1p PC: 4-pole female connector (Binder series 712)  1p PC: 4-pole female connector (Binder series 707)  Connector type  1p PC: CAB-MS-4P-St-ge; xm-PUR; pSe32; CAB-MS-4P-St-ge; xm-PVC; USB  Housing material  Aluminum, anodized in black  Operating temperature  1p PC: Cup to + 85°C (-4°F up to +131°F)  Storage temperature  2p °C up to + 85°C (-4°F up to +131°F)  Storage temperature  2p °C up to + 85°C (-4°F up to +131°F)  Averaging  over 32768 values max.  Voltage supply  42 VDC (± 10 %), protected against bloar was in input INN  42 VS With 1 gial (0V/+Ub), short-circuit-proof  100 mA, switching current npn-, pnp-available (bright-, dark-switching can be switched over)  Averaging  over 32768 values max.  Voltage supply  42 VDC (± 10 %), protected against ploarity reversal, overload protected  TEACH button  for external teaching of color reference values via input INN  1 mp 10	Туре	OT-3-LU-30-16
AC-, DC-operation (adjustable or OFF in case of luminous objects adjustable via software)  Illumination technique  Effect of illumination  Target distance  Light spot size  AC 10 mm - 40 mm ideal distance 30 mm  Light spot size  AE ≥ 0.8  Receiver  3-color filter detector (TRUE COLOR Detector, color filter bend according to CIE 1931)  Alternating light operation  AC: typ. 10 kHz up to 40 kHz  depends on the gain step (AMP1 up to AMP8)  DC: adjustable via PC software  Ambient light  Ambient light  AD 10 mm, AC 20 mA  Ambient light  AC 10 mm of 30 mm  AC 10 mm of 40 mm of 40 mm  AC 10 mm of 40 mm of 40 mm  AC 10 mm of 40 mm of 40 mm  AC 10 mm of 40 mm of 40 mm  AC 10 mm		
(adjustable or OFF in case of luminous objects adjustable via software)	Light source	8x UV-LED, 385 nm
Illumination technique  Effect of illumination  Target distance  Ityp. 10 mm - 40 mm ideal distance 30 mm  Light spot size  Ø 16 mm at 30 mm  Reproducibility  in the X, Y color range each 1 digit at 12-bit A/D conversion  ΔE ≥ 0.8  Receiver  3-color filter detector (TRUE COLOR Detector, color filter bend according to CIE 1931)  Alternating light operation  AC: typ. 10 kHz up to 40 kHz  depends on the gain step (AMP1 up to AMP8)  DC: adjustable via PC software  Ambient light  Protection class  IP 67 (optics), IP 84 (controller)  Current consumption  Interface  RS 232 (optional USB)  Connector type  to PLC: 8-pole female connector (Binder series 712)  to PC: A-pole female connector (Binder series 777)  Connection cable  to PC: CAB-M5-4P-St-ge; xm-PUR; R9232; CAB-M5-4P-St-ge; xm-PVC; USB  Housing material  Operating temperature  Poles lemperature  -20 °C up to + 55 °C (-4 °F up to +131 °F)  Storage temperature  -20 °C up to + 58 °C (-4 °F up to +185 °F)  Pulse lengtherning  Max. switching current  Max. switching frequency  max. 30 kHz (depends on the number of teach-colors and averaging value)  Outputs  Outputs  Outputs  Output (± 10 %), protected against polarity reversal, overload protected  Visualization by means of 5 yellow LED's  Non-volatile EEPROM with parameter sets for 31 colors max. ## **Dimensions**

All dimensions in mm

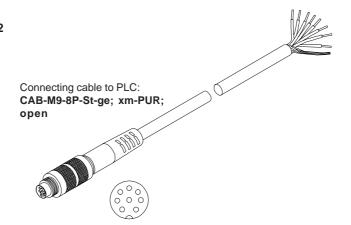

## **Connector Assignment**

## Connection to PLC: 8-pole fem. connector Binder Series 712

Pin:	Color:	Assignment:
1	white	GND (0V)
2	brown	+24VDC (±10%)
3	green	IN0
4	yellow	OUT0 $\frac{4}{}$
5	grey	OUT1
6	pink	OUT2 (ČČČ)
7	blue	OUT3
8	red	OUT4 1 7

Connecting cable:

CAB-M9-8P-St-ge; 2m-PUR; open CAB-M9-8P-St-ge; 5m-PUR; open (Standard length 2 m)

#### Connection to PC: 4-pole fem. connector Binder Series 707

Pin: Assignment:

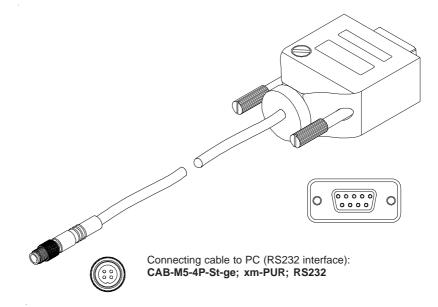

- 1 +24VDC (+Ub, OUT)
- 2 GND (0V)
- 3 RxD
- 4 TxD

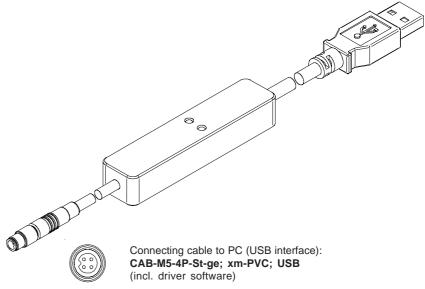

#### Connecting cable:

CAB-M5-4P-St-ge; 2m-PUR; RS232 CAB-M5-4P-St-ge; 5m-PUR; RS232 (Standard length 2 m)

#### alternatively:

Connecting cable (incl. driver software): CAB-M5-4P-St-ge; 2m-PVC; USB CAB-M5-4P-St-ge; 5m-PVC; USB (Standard length 2 m)

## **Measuring Principle**

#### Measuring principle of color sensor colorSENSOR OT-3-LU-30 series:

The colorSENSOR OT-3 provides highly flexible signal acquisition. For example, the sensor can be operated in alternating-light mode (AC mode), which makes the sensor insensitive to extraneous light. It also can be set to constant-light mode (DC mode), which makes the sensor extremely fast and allows a scan-frequency of more than 35 kHz.

When the integrated light source of the colorSENSOR OT-3-LU-30 color sensor is activated, the sensor detects the radiation that is diffusely reflected from the object to be measured.

As a light source the colorSENSOR OT-3-LU-30 color sensor uses eight UV-LED (385nm) with adjustable transmitter power to excite the luminescent marking. An integrated 3-fold receiver for the red, green, and blue content of the visible light that is emitted by the luminescent marking is used as a receiver. As mentioned above, a special feature here is that the gain of the receiver can be set in 8 steps. This makes it possible to optimally adjust the sensor to almost any luminescent colorant that can be excited in the long-wave UV range (365nm or 385nm).

The colorSENSOR OT-3-LU-30 color sensor can be "taught" up to 31 colors. For each of these taught colors it is possible to set tolerances

In X/Y INT or s/i M mode these tolerances form a color cylinder in space. In X/Y/INT or s/i/M mode the tolerances form a color sphere in space. Color evaluation according to s/i M is based on the lab calculation method. All modes can be used in combination with several operating modes such as "FIRST HIT" and "BEST HIT". Raw data are represented with 12 bit resolution.

Color detection either operates continuously or is started through an external PLC trigger signal. The respective detected color either is provided as a binary code at the 5 digital outputs or can be sent directly to the outputs, if only up to 5 colors are to be detected. At the same time the detected color code is visualised by means of 5 LEDs at the housing of the colorSENSOR OT-3-LU-30. [Please note: Visualisation by means of LEDs not available with colorSENSOR LT-1-LC-20 types.]

With a TEACH button at the sensor housing the color sensor can be taught up to 31 colors. For this purpose the corresponding evaluation mode must be set with the software. The TEACH button is connected in parallel to the input IN0 (green wire at cable cCAB-M9-8P-St-ge; xm-PUR; open). [Please note: TEACH button not available with colorSENSOR LT-1-LC-20 types.]

Parameters and measurement values can be exchanged between a PC and the colorSENSOR OT-3-LU-30 color sensor through the serial RS232 interface. All the parameters for color detection also can be saved to the non-volatile EEPROM of the colorSENSOR OT-3-LU-30 color sensor through this serial RS232 interface. When parameterisation is finished, the color sensor continues to operate with the current parameters in STAND-ALONE mode without a PC.

The sensors of the colorSENSOR OT-3-LU-30 series also can be calibrated. Analogous to white-light balancing with color sensors, balancing of the colorSENSOR OT-3-LU-30 could be performed to any luminescent color marking.

#### Visualization

#### Visualization of the color code:

The color code is visualised by way of 5 yellow LEDs at the housing of the colorSENSOR OT-3 color sensor. At the same time in the binary mode (OUT BINARY) the color code indicated on the LED display is output as 5-bit binary information at the digital outputs OUT0 to OUT4 of the 8-pin colorSENSOR OT-3/PLC socket.

The SPECTRO-3 color sensor is able to process a maximum of 31 colors (color code 0 ... 30) in accordance with the corresponding rows in the COLOR TEACH TABLE. An "error" respectively a "not detected color" is displayed by the lighting of all LED (OUT0 ... OUT4 digital outputs are set to HIGH-level).

In the DIRECT mode (OUT DIRECT HI or OUT DIRECT LO) the maximum numbers of colors to be taught is 5 (color no. 0, 1, 2, 3, 4). If DIRECT HI is activated, the specially digital output is set to HI, while the other 4 are set to LO. If the current color does not correspond with any of the teach-in colors, all digital outputs are set to LOW (no LED is lighting).

If DIRECT LO is activated, the specially digital output is set to LO, while the other 4 are set to HI. If the current color does not correspond with any of the teach-in colors, all digital outputs are set to HIGH (all LED are lighting).

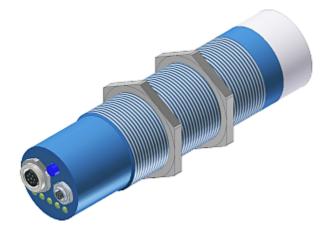

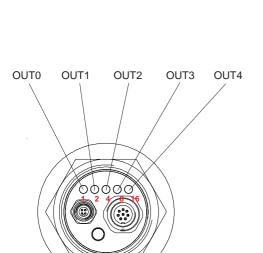

## **LED Display**

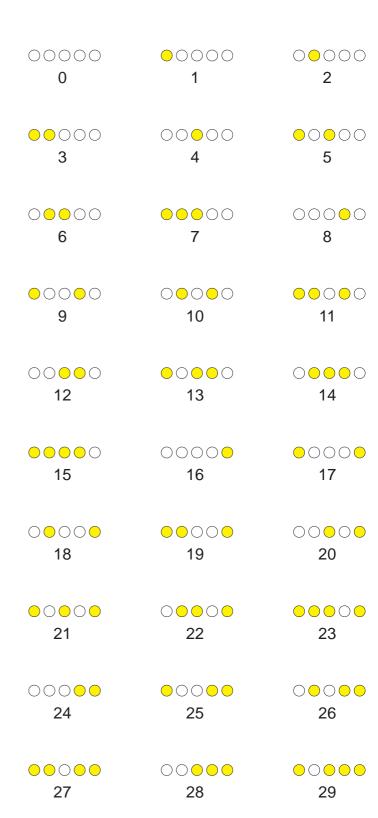

### **LED display:**

The color code is visualized by means of 5 yellow LEDs at the housing of the color sensor. At the same time the color code indicated at the LED display is output as 5-bit binary information at the digital outputs OUT0 ... OUT4 of the 8-pole PLC connector.

In the DIRECT mode the maximum number of color codes to be taught is 5. These 5 color codes can be directly output at the 5 digital outputs. The respective detected color code is displayed by means of the 5 yellow LEDs at the color sensor housing.

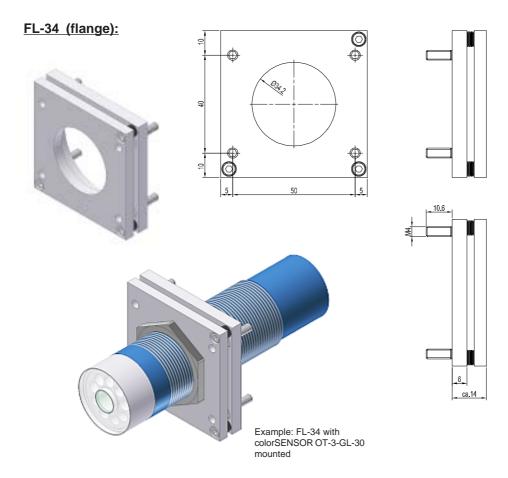

Error or "not detected"
